THE BEST in the Business

6.5-284 vs 6.5-284 Win, 6.5-284 Norma, 6.5-284 Lapua

What's the difference?? There is none if we're talking about the *standard chamber*. There is one chamber spec and it fits 6.5-284 ammo from the various makers differently—it's *in modifying the standard chamber to suit ammunition from different makers that different names are used*.

Ammunition from American makers is typically .004"-.005" smaller at the base than the standard minimum chamber at the same point. European makers, on the other hand, hold their brass closer to minimum chamber diameter.

If we modify the base diameter of a standard chamber reamer to suit 6.5-284 made from Winchester brass, the chamber it cuts may very well be too small to accommodate Norma or Lapua brass. 6.5-284 cases made by Norma or Lapua often require no modification to the standard 6.5-284 chamber for optimum fit.

Our standard 6.5-284 finish reamers will produce chambers that will accept any 6.5-284 ammunition. It's when you ask us to modify the tool to suit specific brass that it becomes a 6.5-284 Norma or 6.5-284 Lapua or 6.5-284 Win.
